CAUCASUS MEALTH CENTER NEWS

At present there is a sanatorium and spa on the Georgiyevsk Plata situated near Kislovodsk at 936 meters above sea level.

The Ministry of Construction of Enterprises for Heavy Industries is considering construction of another sanatorium in the Kislovodsk region to be used as a rest home for workers in heavy industries. The proposed building is a four-story hexagonal structure with accommodations for 150. Twenty eight million rubles have been allotted for the project.

Pyatigorsk Sanatorium No 1 imeni Pirogov was the first to admit wounded veterans of World War II. These veterans make up three fourths of the patients. Balmeological treatments afforded them produced excellent results in treating wound afteraffects and 94 percent of veterans received have been discharged as cured.

Doctors at Pyatigorsk Sanatorium No 3 have added proserin administration to their balmeological course of treatment. This has proven effective in many cases of serious nervous disorders.
